We are proud to announce the upcoming release of the next generation of our grant writing and grant management solution GrantWave in September. Thanks to your valuable feedback we implemented many exciting new features and improve a lot of existing ones. Some of the key features are:

- Complete overhaul of the database engine. GrantWave now incorporates Microsoft state-of-the-art client-server database technology giving you fast and reliable access to all your data.
- User access and authorization. We added a GrantWave user module that allows you to define who can access what kind of information. This allows you to keep your data safe and lets you manage who can see and edit what.
- Full Outlook synchronization support. Now you can import and export all your contacts from and to Microsoft Outlook. Even better GrantWave keeps your contacts synchronized eliminating the need to update data at two different locations. And to top it we also synchronize your appointments, tasks and grantors as well.
- Complete new budget and expense tracking module: The budget and grant tracking module has seen a complete overhaul. Now it allows you to set up your budget in GrantWave - categorize it, itemize it, revise it - and follow up with your budget through a complete new expense tracking system. Running summaries show you how much is left overall or per category and powerful reports prepare you for your next executive meeting in minutes.
- Reporting: Our enhanced reporting engine allows you to customize any report to your liking. The report you're looking for is not in the system? Design your own with our new graphical query designer. If it's in the database, you can print it!

These are just a few examples of GrantWave many new features. Stay tuned...
